Dear List:

Is it true that Spect scan can not be reliable when it comes to HBOT. A doctor in St.Louis Mo told me that the scan changes from day to day. The seizures make it change and he said that the changes we saw and Dr. Uszler reported on were really not improvements just I guess mistakes. If you take another scan the next day it would be different. What is the truth about this. This doctor was used by Georgia State to determine if a child would get the treatments paid for. Of course he denied that it helped in anyway. He said the spect's did not prove that a real change occurred. Can anyone explain? This doctor was a Neurologist.Rhonda
